Work Authorization: Holds Official S Pass Eligibility Letter • Serving 3-Year MOE Tuition Grant Bond (Immediate Availability)

PROFILE

Information Technology graduate with hands-on experience developing robust Full-stack web applications and AI-driven platforms. Proficient in modern tech stacks including React, Next.js, Node.js, TypeScript, Python, and PostgreSQL. Experienced in API integration, database management, and cloud deployment via Docker and Kubernetes. Demonstrated ability to build scalable software solutions, from enterprise IT tools to secure financial dashboards. Strong problem-solving skills with a commitment to long-term employment in Singapore (holding an S Pass Eligibility Letter and serving a 3-year MOE bond.

EDUCATION

Temasek Polytechnic |Diploma in Information Technology Graduation Date: May 2026

TECHNICAL SKILLS

- **Languages & Frontend:** TypeScript, JavaScript, Python, HTML, CSS, React.js, Next.js, Tailwind CSS
- **Backend & Databases:** Node.js, Express.js, RESTful APIs, PostgreSQL (Drizzle ORM, Neon), MySQL, MongoDB
- **AI & Data Engineering:** Retrieval-Augmented Generation (RAG), Function/Tool Calling, OpenAI & Gemini APIs, Pandas, Scikit-learn, Pydantic, LangGraph.
- **DevOps & Testing:** Docker, Kubernetes (AKS), Jenkins, CI/CD Pipelines, Git/GitHub, Jest, Cypress, ServiceNow, Power Automate

PROFESSIONAL EXPERIENCE

Temasek Polytechnic ITSM, Singapore *Digital Ambassador Intern | April 2025 – Aug 2025*

- Coordinated with external vendors and partners for hardware replacement, warranty support, and component escalation, providing timely status updates to end-users and stakeholders.
- Streamlined departmental compliance reporting and IT asset tracking by replacing manual checks with automated Microsoft Power Automate approval workflows.
- Maintained high platform availability and consistently met strict ServiceNow SLAs by resolving L1/L2 software, network, and access-control incidents across campus systems.
- Reduced recurring system bottlenecks by analyzing operational logs, supporting CI/CD deployment testing, and documenting standardized troubleshooting runbooks.

SCHOOL & PERESONAL PROJECTS

Full-Stack Financial Dashboard & Banking App | *React, Node.js, Express.js, PostgreSQL, RESTful APIs*

- Eliminated duplicate transactions and unauthorized access to a digital banking web app by enforcing API idempotency controls, route gatekeepers, and Clerk session authentication.
- Guaranteed 100% ledger accuracy and zero-downtime releases across multi-table financial records using ACID-compliant PostgreSQL queries and automated Jest unit/integration tests.

IT Helpdesk Chatbot & Advanced RAG Pipeline | Python, PostgreSQL, OpenAI API

- Automated first-line IT support by instantly resolving common user queries and routing unresolved issues to technical teams as structured tickets via LLM tool-calling.
- Maximized answer accuracy and mitigated AI hallucinations by combining hybrid search (BM25 lexical + dense vector search with Reciprocal Rank Fusion) and automated LLM-as-a-Judge safety guardrails.

AI-Powered Slide Generation System (Edulift V2) | *Python, Streamlit, Gemini API, python-pptx*

- Cut manual presentation preperation time for educators by automatically converting unstructured teaching notes into structured PowerPoint slide decks with relevant Pexels imagery.
- Prevented malformed slide outputs and runtime crashes across multi-step LLM runs by enforcing strict JSON schema validation and automated error recovery.

HDB Resale Price Prediction Application |*Python, Scikit-learn, Streamlit, Machine Learning*

- Improved Singapore public housing resale price prediction accuracy (MSE and R^2) by engineering a custom risk_score feature, removing outliers, and tuning ensemble models.
- Enabled public, reproducible access to large-scale predictive analytics by deploying the interactive platform on Streamlit Cloud with Git LFS model versioning.
