PROFESSIONAL SUMMARY

Detail-oriented Software Engineer with a strong foundation in full-stack development, RESTful APIs, and DevOps practices. Experienced in developing scalable applications using React, Node.js, and PostgreSQL, and deploying them via automated CI/CD pipelines with Docker and Kubernetes. Adaptable at working in cross-functional environments, writing automated tests, and applying secure coding practices to deliver reliable, mission-critical digital solutions.

TECHNICAL SKILLS

- **Languages & Frameworks:** JavaScript, TypeScript, Python, React.js, Node.js, Express.js, HTML/CSS.
- **Databases:** PostgreSQL, MongoDB, MySQL, SQL
- **DevOps & Cloud:** Docker, Kubernetes (AKS), Jenkins, AWS (Lambda, S3, DynamoDB), CI/CD Pipelines
- **Testing & Operations:** Jest, Cypress, Git/GitHub, Aglie/Scurm, Restful API Design, Postman
- **Automation & ITSM:** Power Automate, ServiceNow, Microsoft Intune

PROFESSIONAL EXPERIENCE

Temasek Polytechnic ITSM, Singapore

Digital Ambassador Intern | May 2025 – Aug 2025

- Collaborated with cross-functional IT and infrastructure teams to investigate, troubleshoot, and resolve software defects and technical issues in a timely manner.
- Designed and implemented Power Automate workflows to streamline automated compliance reporting and improve department efficiency.
- Executed software testing, documented technical findings, and provided temporary and permanent resolutions for network and system issues.
- Managed service requests via ServiceNow and deployed client platform upgrades using Microsoft Intune, ensuring operational standards and SLAs were consistently met.

TECHNICAL PROJECTS

Full-Stack Financial Dashboard & Banking App | *React.js, Tailwind CSS, Node.js, Express.js, PostgreSQL, Clerk, TanStack Query*

- Engineered a secure, full-stack banking platform featuring interactive financial dashboards, dynamic transaction ledgering, and real-time data visualization.
- Designed a complex PostgreSQL relational schema to handle robust transaction mapping, utilizing multi-table SQL joins and transaction-safe queries to ensure ledger integrity.
- Implemented high-integrity backend systems, including Clerk-based authentication, API route protection, and idempotency logic to prevent duplicate transactions
- Developed a highly responsive UI using React and Tailwind CSS, leveraging TanStack Query for efficient server-state management, infinite scrolling, and automated data caching.
- Enforced strict business logic gatekeepers for transaction limit validations and account status checks, ensuring professional-grade security and financial compliance.

AI-Powered Slide Generation System (Edulift V2) |*Python, Streamlit, Gemini API, Pexels API, python-pptx*

- Developed an AI-powered slide generation system that converts teaching notes into PowerPoint presentations.
- Implemented a dynamic template scanner to analyze uploaded PowerPoint layouts and placeholders using python-pptx.
- Integrated Gemini API for content generation and Pexels API for automated image sourcing.
- Designed a JSON-based template registry system to support flexible slide generation workflows.

Pet Adoption Platform with CI/CD Pipeline | *MERN Stack, Jenkins, Docker, AKS, Cypress, Jest*

- Developed a full-stack MERN platform featuring listing management, advanced filtering, and complete CRUD operations.
- Engineered an automated CI/CD pipeline using Jenkins, integrating GitHub version control, email notifications, and Grafana build monitoring.
- Containerized the application via Docker and deployed scalable services to Azure Kubernetes Service (AKS).
- Implemented comprehensive frontend and backend testing (Jest, Mocha, Cypress, Supertest, Sinon.js) to ensure cross-browser compatibility and robust error handling.

HDB Resale Price Prediction Application |Python, Scikit-learn, Streamlit, Machine Learning

- Developed and deployed a machine learning web application to predict HDB resale prices using Singapore housing transaction datasets.
- Performed data preprocessing, feature engineering, outlier removal, and hyperparameter tuning using RandomForestRegressor and GradientBoostingRegressor.
- Achieved improved prediction accuracy through model optimization and evaluation using MSE and R^2 metrics.
- Deployed the application on Streamlit Cloud with GitHub integration and Git LFS for large model management.

EDUCATION

Temasek Polytechnic |Diploma in Information Technology
Graduation Date: May 2026
